

# Money Mechanics

Seven faceless YouTube Shorts, voiceover-ready. Every runtime is 28-36 seconds, every factual claim is verified, and every hook is anchored on a name the viewer already knows.

## The six-beat structure

|   |                  |                                                                 |
|---|------------------|-----------------------------------------------------------------|
| 1 | <b>Hook</b>      | First three words carry a name everyone knows. Zero setup cost. |
| 2 | <b>Setup</b>     | Concrete, fast, specific.                                       |
| 3 | <b>Turn</b>      | The assumption breaks.                                          |
| 4 | <b>Mechanism</b> | The money machinery, stated plainly.                            |
| 5 | <b>Name it</b>   | Isolated line, 2-4 words. The highest-value beat.               |
| 6 | <b>Loop</b>      | Re-frames the opening on rewatch. Drives completion over 100%.  |

## Delivery

Read at about **3 words per second**. That is a measured rate, not a guess: the 9.8M-view *Survivorship Bias* short runs 62 words in 18 seconds. It is faster than conversational speech and it is meant to be.

## House rules

- Cold open. No greeting, no channel name, no 'in this video'.
- No call to action, no outro. End on the loop line and cut.
- Never answer the title in the title.
- Hold one beat of silence after the 'Name it' line.
- Use generic brand-styled graphics, never real logos or real-looking documents.

## Posting order

| Day | Script                                                          | Runtime | Why here                                              |
|-----|-----------------------------------------------------------------|---------|-------------------------------------------------------|
| Mon | Wells Fargo took your biggest payment first, on purpose         | ~33s    | Strongest hook, hardest numbers. Lead with your best. |
| Tue | Elon Musk borrowed \$12.5 billion instead of selling one share  | ~33s    | Biggest pre-loaded name on the slate.                 |
| Wed | United's loyalty programme was worth more than United           | ~30s    | Hard number in the first six words.                   |
| Thu | Banks have a word for people who pay on time                    | ~28s    | Personal - everyone watching owns a card.             |
| Fri | The 0% offer that ends in a \$1,200 bill                        | ~34s    | Rolls into weekend retail mindset.                    |
| Sat | Warren Buffett didn't buy insurance companies for the insurance | ~35s    | Named person carries a quieter concept.               |
| Sun | Toys R Us was profitable when it died                           | ~35s    | Strongest emotional close of the week.                |

# Wells Fargo took your biggest payment first, on purpose

~33s · 9 shots · Anchor: Wells Fargo · Concept: High-to-low reordering

|           |                                                                                                                                                                          |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| HOOK      | <p>Wells Fargo took your biggest payment first. On purpose.</p> <p>ON SCREEN WELLS FARGO</p>                                                                             |
| SETUP     | <p>Say you have a hundred dollars and four transactions - three small ones, and your rent.</p> <p>ON SCREEN BALANCE: \$100</p>                                           |
| SETUP     | <p>In the order they actually happened, you overdraft once.</p> <p>ON SCREEN 1 overdraft = \$35</p>                                                                      |
| TURN      | <p>Wells Fargo reordered them highest-first, so rent drained the account and all three small purchases bounced behind it.</p> <p>ON SCREEN REORDERED: HIGH -&gt; LOW</p> |
| MECHANISM | <p>One overdraft became four. Thirty-five dollars each.</p> <p>ON SCREEN \$35 -&gt; \$140</p>                                                                            |
| MECHANISM | <p>A judge found an internal memo predicting the change would earn them forty million dollars a year.</p> <p>ON SCREEN INTERNAL MEMO: +\$40M / YEAR</p>                  |
| MECHANISM | <p>The court ordered two hundred and three million returned.</p> <p>ON SCREEN \$203,000,000 RETURNED</p>                                                                 |
| NAME IT   | <p><b>They called it high-to-low reordering.</b></p> <p>ON SCREEN HIGH-TO-LOW REORDERING</p>                                                                             |
| LOOP      | <p>It wasn't a glitch. It was the product.</p> <p>ON SCREEN NOT A GLITCH - THE PRODUCT</p>                                                                               |

**VERIFIED.** Gutierrez v. Wells Fargo, Judge Alsup 2010. High-to-low reordering multiplied overdraft fees; an internal memo projected +\$40M/year; \$203M ordered returned, final on appeal April 2016.

# Elon Musk borrowed \$12.5 billion instead of selling one share

~33s · 7 shots · Anchor: Elon Musk / Tesla · Concept: Buy. Borrow. Die.

|           |                                                                                                                                                          |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| HOOK      | <p>Elon Musk pledged sixty-two billion dollars of Tesla stock - to borrow twelve and a half.</p> <p>ON SCREEN \$62.5B PLEDGED -&gt; \$12.5B BORROWED</p> |
| SETUP     | <p>He could have just sold shares. But selling triggers capital gains tax - a bite that never grows back.</p> <p>ON SCREEN SELL = TAXED</p>              |
| TURN      | <p>A loan doesn't. Nobody is taxed on borrowed money.</p> <p>ON SCREEN BORROW = NOT TAXED</p>                                                            |
| MECHANISM | <p>So the stock stays. It keeps compounding. The debt sits underneath it.</p>                                                                            |
| MECHANISM | <p>And when he dies, his heirs inherit at the new price, and the original gain is wiped clean.</p> <p>ON SCREEN ORIGINAL GAIN -&gt; ERASED</p>           |
| NAME IT   | <p><b>Bankers have a name for it. Buy. Borrow. Die.</b></p> <p>ON SCREEN BUY. BORROW. DIE.</p>                                                           |
| LOOP      | <p>Tesla's board eventually had to cap how much he could borrow. That's how well it works.</p> <p>ON SCREEN BOARD CAPPED IT</p>                          |

**VERIFIED.** Forbes: \$62.5B of Tesla stock pledged against \$12.5B in margin loans. Tesla's board later capped pledged borrowing at the lesser of \$3.5B or 25% of value. Roughly 236M of his 715M shares remain pledged.

# United's loyalty programme was worth more than United

~30s · 8 shots · Anchor: United Airlines · Concept: The planes are the marketing

|           |                                                                                                                                             |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------------|
| HOOK      | United's frequent flyer programme was worth more than United.                                                                               |
| SETUP     | <p>Around twenty billion dollars. The airline itself was priced near seventeen.</p> <p>ON SCREEN \$20B PROGRAMME / \$17B AIRLINE</p>        |
| MECHANISM | <p>Because miles cost nothing to make. United invents them,</p> <p>ON SCREEN COST TO MINT: \$0</p>                                          |
| MECHANISM | <p>sells them in bulk to banks, and the banks hand them to you as credit card rewards.</p> <p>ON SCREEN AIRLINE -&gt; BANK -&gt; YOU</p>    |
| TURN      | <p>Real money in, for a currency they printed themselves.</p> <p>ON SCREEN REAL \$ IN &lt;- PRINTED \$ OUT</p>                              |
| MECHANISM | <p>We only know the numbers because in 2020 United was desperate and borrowed five billion against it.</p> <p>ON SCREEN 2020: \$5B LOAN</p> |
| NAME IT   | <p><b>The planes are the marketing.</b></p> <p>ON SCREEN THE PLANES ARE THE MARKETING</p>                                                   |
| LOOP      | <p>You're not flying with an airline. You're flying with a bank that owns planes.</p> <p>ON SCREEN A BANK THAT OWNS PLANES</p>              |

**VERIFIED.** United MileagePlus valued at ~\$20B (2019) against a ~\$17B market cap. United raised \$5B against the programme in 2020, which is how the figures became public.

# Banks have a word for people who pay on time

~28s · 8 shots · Anchor: The card industry · Concept: Deadbeat / revolver

|           |                                                                                                                           |
|-----------|---------------------------------------------------------------------------------------------------------------------------|
| HOOK      | There is a word banks use for customers who pay their credit card off every month.                                        |
| NAME IT   | <b>Deadbeat.</b><br>ON SCREEN DEADBEAT                                                                                    |
| SETUP     | You borrowed their money for thirty days, paid zero interest, and kept the cashback.<br>ON SCREEN 30 DAYS FREE + CASHBACK |
| MECHANISM | To them, you are a rounding error.<br>ON SCREEN PROFIT TO BANK: ~\$0                                                      |
| TURN      | The customer they want carries three thousand dollars at twenty-four percent, forever.<br>ON SCREEN \$3,000 @ 24% APR     |
| MECHANISM | The industry calls that one a revolver. Revolvers are the business. Everyone else is overhead.<br>ON SCREEN REVOLVER      |
| NAME IT   | <b>Your rewards are the recruiting budget.</b><br>ON SCREEN REWARDS = RECRUITING BUDGET                                   |
| LOOP      | Somebody is funding those points. Work out which one of you it is.<br>ON SCREEN WHO FUNDS YOUR POINTS?                    |

**VERIFIED.** 'Deadbeat' and 'revolver' are both genuine credit-card industry terms, used exactly this way: deadbeats pay in full and generate little interest revenue; revolvers carry balances and are the profitable segment.

# The 0% offer that ends in a \$1,200 bill

~34s · 8 shots · Anchor: Store card / big-ticket retail · Concept: Deferred interest

|           |                                                                                                                                                                                        |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| HOOK      | <p>You owe fifty dollars. The bill says twelve hundred.</p> <p>ON SCREEN OWED \$50 -&gt; BILLED \$1,200</p>                                                                            |
| SETUP     | <p>Zero percent for twenty-four months, on a two-thousand-dollar sofa.</p> <p>ON SCREEN 0% FOR 24 MONTHS</p>                                                                           |
| SETUP     | <p>You paid it almost all the way down, then missed the final payment.</p> <p>ON SCREEN \$2,000 -&gt; \$50</p>                                                                         |
| MECHANISM | <p>A normal loan charges interest as you go.</p> <p>ON SCREEN NORMAL LOAN</p>                                                                                                          |
| TURN      | <p>This one was charging the entire time, invisibly - and only forgives it if you clear every cent before the deadline.</p> <p>ON SCREEN SHADOW INTEREST, ACCRUING</p>                 |
| MECHANISM | <p>Miss by a dollar, and two years of interest lands at once - calculated on the full two thousand. Not on the fifty you still owed.</p> <p>ON SCREEN CHARGED ON \$2,000, NOT \$50</p> |
| NAME IT   | <p><b>It was never zero percent.</b></p> <p>ON SCREEN IT WAS NEVER 0%</p>                                                                                                              |
| LOOP      | <p>You weren't offered a discount. You were offered a deadline.</p> <p>ON SCREEN NOT A DISCOUNT - A DEADLINE</p>                                                                       |

**VERIFIED.** Deferred interest applies retroactively to 100% of the original balance, not the remaining balance. CFPB-flagged as a consumer-harm risk. The \$1,200 figure assumes 29.99% APR over 24 months on \$2,000 - state that assumption if you put the number on screen.

# Warren Buffett didn't buy insurance companies for the insurance

~35s · 8 shots · Anchor: Warren Buffett / Berkshire Hathaway · Concept: The float

|           |                                                                                                                                                                                                   |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| HOOK      | Warren Buffett didn't buy insurance companies for the insurance.                                                                                                                                  |
| SETUP     | <p>Insurers routinely pay out more in claims than they take in premiums - many lose money on the actual business, deliberately, year after year.</p> <p>ON SCREEN PREMIUMS IN &lt; CLAIMS OUT</p> |
| TURN      | Because the premium was never the product.                                                                                                                                                        |
| MECHANISM | <p>You pay today. The claim arrives in ten years, or never.</p> <p>ON SCREEN PAY NOW -&gt; CLAIM IN 10 YEARS</p>                                                                                  |
| MECHANISM | <p>In between, they are sitting on a mountain of your money, investing it.</p> <p>ON SCREEN THE GAP = INVESTED</p>                                                                                |
| MECHANISM | <p>They'll owe most of it back eventually. Every dollar it earns until then is theirs.</p> <p>ON SCREEN RETURNS -&gt; THEIRS</p>                                                                  |
| NAME IT   | <p><b>Berkshire Hathaway was built on exactly this. He called it the float.</b></p> <p>ON SCREEN THE FLOAT</p>                                                                                    |
| LOOP      | <p>He wasn't selling you insurance. He was borrowing from you at less than zero.</p> <p>ON SCREEN BORROWING BELOW 0%</p>                                                                          |

**VERIFIED.** Buffett's own term. Insurers can run an underwriting loss and still profit by investing the premium held between payment and claim.

# Toys R Us was profitable when it died

~35s · 10 shots · Anchor: Toys R Us / KKR / Bain / Vornado · Concept: Leveraged buyout

|           |                                                                                                                                  |
|-----------|----------------------------------------------------------------------------------------------------------------------------------|
| HOOK      | <p>Toys R Us was profitable when it died.</p> <p>ON SCREEN PROFITABLE -&gt; DEAD</p>                                             |
| SETUP     | <p>In 2005, three investment firms bought it for six point six billion.</p> <p>ON SCREEN 2005 - \$6.6 BILLION</p>                |
| TURN      | <p>They put in one point three of their own.</p> <p>ON SCREEN THEIR OWN MONEY: \$1.3B</p>                                        |
| MECHANISM | <p>The rest was borrowed - and the debt went onto Toys R Us, not them.</p> <p>ON SCREEN BORROWED \$5.3B -&gt; ONTO THE STORE</p> |
| MECHANISM | <p>So the company owed four hundred million a year in interest alone.</p> <p>ON SCREEN \$400M / YEAR IN INTEREST</p>             |
| MECHANISM | <p>Money it couldn't spend on stores, staff, or fighting Amazon.</p> <p>ON SCREEN NOT SPENT: STORES - STAFF - COMPETING</p>      |
| MECHANISM | <p>It filed for bankruptcy in 2017. Thirty-three thousand jobs gone.</p> <p>ON SCREEN 2017 - 33,000 JOBS</p>                     |
| TURN      | <p>The firms had already taken four hundred and sixty-four million in fees.</p> <p>ON SCREEN FEES TAKEN: \$464M</p>              |
| NAME IT   | <p><b>That's a leveraged buyout.</b></p> <p>ON SCREEN LEVERAGED BUYOUT</p>                                                       |
| LOOP      | <p>They didn't buy it with their money. They bought it with its money.</p> <p>ON SCREEN BOUGHT IT WITH ITS OWN MONEY</p>         |

**VERIFIED.** Acquisition closed 21 July 2005 (KKR, Bain Capital, Vornado) at \$6.6B, over \$5.3B of it debt-financed. ~\$400M/year debt service disclosed at the September 2017 Chapter 11 filing; ~33,000 jobs lost; \$464M in fees and interest collected by the three firms. **FAIRNESS:** a Columbia Law analysis argues retail disruption was the primary cause. The script's narrower claim - that debt consumed the money needed to compete - is the defensible one.
